2019 **MHD**, *Multimodal Humor Detection Dataset*.

- We provide the Multimodal Humor Dataset (MHD), having textual dialogues with the corresponding video counterparts.
- We present a large-scale manually annotated dataset for a comprehensive multimodal understanding of visual humor.

- 2018 **GAN**, *Granular Attention Network for Visual Dialog*.
- We investigate various attention models proposed in the past. However, the scale at which attention needs to be applied has not been well examined.
 - We provide a new method, Granular Multi-modal Attention, where we aim to particularly address the question of the right granularity at which one needs to attend while solving the Visual Dialog task.
- 2018 **DAN**, *Dynamic Attention Network for Task-Oriented Grounding*.
- We provide a novel Dynamic Attention Network architecture for the efficient multi-modal fusion of text and visual representations, which can generate a robust definition of state for the policy learner.
 - Our model assumes no prior knowledge from visual and textual domains and is an end-to-end trainable.
 - We show that Dynamic Attention helps in achieving grounding and also aids in the policy learning objective.
